

PROFILE SUMMARY

Salesforce Developer with hands-on experience across Apex, Lightning Web Components (LWC), SOQL, SOSL, Process Automation (Flows), Validation Rules, Triggers, Custom Objects, and Reports & Dashboards. Currently completing a 5-month Salesforce Developer internship, building real-world applications end-to-end. Delivered full-featured Salesforce projects — including a Hospital Management System and a Hotel Management System — covering custom data models, business process automation, security/sharing configuration, and Lightning UI. Passionate about building scalable, well-architected Salesforce solutions and continuously growing as a platform developer.

EDUCATION

Poornima Institute of Engineering and Technology (RTU)	8.0 CGPA
• Bachelor of Technology (B.Tech), CSE – AI 2022 – 2026 (Graduated)	
SPS Senior Secondary School, Losal (RBSE)	79%
• Senior Secondary (Class 12th)	

EXPERIENCE

Salesforce Developer Intern – Virtuowhiz Consulting Pvt. Ltd., Jaipur	Apr 2026 – Present
• Completing a 5-month, in-office Salesforce Developer internship (Apr 2026 – Aug 2026), building production-style applications using Apex, LWC, SOQL, Salesforce Flow, Validation Rules, and Reports & Dashboards.	
• Built two mentor-assigned, end-to-end Salesforce projects — Hospital Management System and Hotel Management System — covering custom object design, process automation, and security configuration.	
• Followed Salesforce development best practices using VS Code and Salesforce CLI, including version control with Git.	
Cyber Security Intern – Grras Solutions Pvt. Ltd., Jaipur	Jul 2024 – Oct 2024
• Performed vulnerability assessments and penetration testing aligned with OWASP Top 10.	
• Assisted with incident response and created security awareness material.	

TECHNICAL SKILLS

- **Salesforce Development:** Apex, Lightning Web Components (LWC), SOQL, SOSL, Salesforce Flow, Triggers, Validation Rules, Custom Objects & Fields
- **Salesforce Admin & Config:** Salesforce CRM, User & Security Management, Role Hierarchy, Profiles & Permission Sets, Sharing Rules, Reports & Dashboards
- **Tools & Platforms:** Salesforce CLI, VS Code, Git, GitHub
- **Programming:** Python, C++, Object-Oriented Programming (OOP)
- **Databases:** MySQL, SOQL/SOSL

SALESFORCE PROJECTS (Internship)

Assigned by mentor and built independently during the Salesforce Developer internship at Virtuowhiz Consulting Pvt. Ltd.

Hospital Management System

Salesforce Platform | Apex, LWC, Flow, Custom Objects

GitHub: <https://github.com/Rajusewda/Hospital-Management-System>

- Built an end-to-end hospital operations app covering patient registration, OPD appointments, IPD admissions, ward/bed allocation, treatment, medicine, billing, and discharge.
- Designed a custom data model with 9 objects — Patient, Doctor, Appointment (OPD), Admission (IPD), Ward, Bed, Treatment, Medicine, and Bill — supporting distinct workflows for Receptionist, Doctor, Nurse, Billing Executive, and Hospital Admin user roles.
- Automated bed lifecycle management with Flow: bed status updates to "Occupied" on admission and reverts to "Available" automatically on patient discharge.
- Configured automated appointment reminder emails sent one day before each scheduled visit.

- Built Reports & Dashboards for Daily OPD volume, Admitted Patients, ICU Occupancy, Available Beds, and Pending Bills to give staff real-time operational visibility.

Hotel Management System

Salesforce Platform | Apex, LWC, Flow, Validation Rules, Approval Process

- Developed a full-featured hotel booking and operations platform managing customers, room inventory, bookings, services, invoicing, and staff access.
- Modeled multiple room types (Single, Double, Deluxe, Suite) with fixed inventory per type, enforcing availability limits via validation logic that blocks bookings once a room type is fully reserved.
- Automated booking amount calculation from check-in/check-out date-time using standard 12 PM–10 AM check-in/out rules, including add-on service costs (laundry, food ordering, etc.).
- Built an approval process routing discount requests to the Hotel Manager for sign-off before the discount is applied, and configured a loyalty engine awarding 1% reward points per booking, redeemable on future stays.
- Implemented tiered discount logic based on a customer's historical booking count, and configured multiple payment methods (UPI, Card, Netbanking) each with distinct convenience fees and field sets.
- Automated transactional emails for booking confirmation, reward point updates, and post-checkout feedback (sent 1 day after checkout), plus Case creation from website complaint submissions.
- Enforced field- and object-level security so only Help Desk can create bookings, Help Desk can create but not edit/delete payments, and customer records cannot be deleted.
- Built a monthly report for hotel managers summarizing which room types are booked most, with associated revenue.

CERTIFICATIONS AND ACHIEVEMENTS

- Letter of Recommendation (LOR) from Grras Solutions Pvt. Ltd. for excellent performance during Cyber Security Internship – 2024
- Completed Ethical Hacking Internship – Grras Solutions Pvt. Ltd., 2024
- Participated and qualified in national-level hackathons: Smart India Hackathon, Rajasthan Police Hackathon
