PROFILE SUMMARY

Undergraduate in Computer Science (AI/ML) with strong Python background and practical implementation experience in developing applications based on machine learning, NLP, and LLM integration. Experienced in handling structured and unstructured data, developing complete solutions based on machine learning, and designing retrieval augmented AI systems with safety controls. Interested in leveraging applications of AI/ML in data science, automation, and application-level AI systems.

EDUCATION

Poornima Institute of Engineering and Technology (RTU) [8.0 CGPA]

- Bachelor of Technology (B.Tech), CSE – AI (2022 – Present)

SPS Senior Secondary School, Losal (RBSE) [79%]

- Senior Secondary (Class 12th)

WORK EXPERIENCE

DATA SCIENCE – Softech Era Pvt. Ltd.

- Built ML-based models for predicting diseases such as diabetes and heart conditions.
- Learned to communicate technical outcomes in simplified terms for better understanding.

Cyber Security Intern – Grras Solutions Pvt. Ltd, Jaipur

- Performed vulnerability assessments and penetration testing aligned with OWASP Top 10.
- - Assisted with incident response and created security awareness material.

PROFESSIONAL SKILL

- Programming & AI: Python, C++, HTML, CSS, Machine Learning, NLP, LLM
- ML & Applied AI: Prompt Engineering, RAG
- Data & Systems: MySQL, Vector Databases, Pandas, NumPy, APIs & REST Services
- Tools: Git, GitHub, Streamlit, VS Code

SOFT SKILLS

- Problem-Solving
- Team Collaboration
- Communication Skills
- Time Management

PROJECTS

Cyber Threat Intelligence Platform with ML-based Threat Classification

- Tech: Python, Pandas, Scikit-learn, Streamlit.
- Built an end-to-end AI-powered CTI platform to collect, preprocess, and analyze cyber incident data.
- Implemented an ML-based text classification model (TF-IDF + Logistic Regression/SVM) to automatically classify threats such as phishing, malware, and ransomware.
- Designed real-time prediction pipeline and interactive dashboard for monitoring cyber threats.
- Link:- <https://cyber-threat-intel-rajusewda.streamlit.app>

Website-Based AI Chatbot using RAG (LLaMA-3)

- Tech: Python, LLaMA-3, ChromaDB, NLP
- Designed and implemented a production-style RAG system that answers queries strictly from indexed website content. Ensured safe AI behavior by rejecting out-of-scope questions instead of hallucinating answers.
- Used ChromaDB for semantic search and a locally hosted LLaMA-3 model for inference.

CERTIFICATIONS AND ACHIEVEMENTS

- Letter of Recommendation (LOR) from Grras Solutions Pvt. Ltd. for excellent performance during Cyber Security Internship – 2024
- Completed Ethical Hacking Internship – Grras Solutions Pvt. Ltd., 2024
- Participated and Qualified in national-level hackathons including:
 - Smart India Hackathon
 - Rajasthan Police Hackathon
