PROFILE SUMMARY

Software Engineer with a strong foundation in Object-Oriented Programming, Data Structures & Algorithms, and applied Generative AI, combined with hands-on experience building production-style enterprise applications during a Software Development internship — covering data modeling, business logic automation, secure access control, and API integrations. Also built a Generative AI application applying Retrieval-Augmented Generation (RAG) and LLM integration for real-world information retrieval. Comfortable working across the stack — from algorithmic problem solving to system design to shipping working software.

EDUCATION

Poornima Institute of Engineering and Technology (RTU)	8.0 CGPA
• Bachelor of Technology (B.Tech), CSE – AI 2022 – 2026 (Graduated)	
SPS Senior Secondary School, Losal (RBSE)	79%
• Senior Secondary (Class 12th)	

EXPERIENCE

Software Development Intern – Virtuowhiz Consulting Pvt. Ltd., Jaipur	Apr 2026 – Present
• Completing a 5-month, in-office software development internship on the Salesforce platform, designing and building production-style enterprise applications end-to-end using Apex (OOP-based backend logic), custom data modeling, and process automation.	
• Built two mentor-assigned, full-stack applications — Hospital Management System and Hotel Management System — covering entity/data modeling, business rule automation, approval workflows, and role-based access control.	
• Practiced core software engineering workflows: version control with Git, CLI-driven development, and iterative build-test cycles using VS Code.	
Cyber Security Intern – Grras Solutions Pvt. Ltd., Jaipur	Jul 2024 – Oct 2024
• Performed vulnerability assessments and penetration testing aligned with OWASP Top 10.	
• Assisted with incident response and created security awareness material.	

TECHNICAL SKILLS

- **Programming:** Python, C++, Apex, HTML, CSS, JavaScript, Object-Oriented Programming (OOP)
- **Problem Solving:** DSA, Competitive Programming, Algorithmic Problem Solving (Python/C++)
- **AI/GenAI:** LLM Integration, Generative AI, RAG, Prompt Engineering
- **APIs & Integration:** MCP, REST APIs, API Integration, Security
- **Enterprise / Salesforce Development:** Apex, Lightning Web Components (LWC), SOQL, SOSL, Salesforce Flow, Triggers, Validation Rules, Custom Objects
- **Databases:** MySQL, Vector Databases, SOQL/SOSL
- **Tools & Platforms:** Git, GitHub, VS Code, Salesforce CLI

PROJECTS

Website-Based AI Chatbot using RAG (LLaMA-3) [Link](#)

Python, LLaMA-3, ChromaDB, NLP

- Designed and implemented a production-style Retrieval-Augmented Generation (RAG) system that answers queries strictly from indexed website content, rejecting out-of-scope questions instead of hallucinating answers.
- Used ChromaDB for semantic search and a locally hosted LLaMA-3 model for inference, applying vector embeddings for accurate context retrieval.

The following two projects were assigned by my mentor and built independently during my Software Development internship at Virtuowhiz Consulting Pvt. Ltd., on the Salesforce platform.

Hospital Management System

[Link](#)

Salesforce Platform | Apex, LWC, Flow, Custom Objects

- Built an end-to-end hospital operations application covering patient registration, OPD appointments, IPD admissions, ward/bed allocation, treatment, medicine, billing, and discharge.
- Designed a custom data model with 9 entities — Patient, Doctor, Appointment (OPD), Admission (IPD), Ward, Bed, Treatment, Medicine, and Bill — supporting distinct workflows for 5 user roles.
- Automated bed lifecycle management: bed status updates to "Occupied" on admission and reverts to "Available" automatically on patient discharge.
- Configured automated appointment reminder emails sent one day before each scheduled visit, and built real-time operational reports (OPD volume, ICU occupancy, pending bills).

Hotel Management System

Salesforce Platform | Apex, LWC, Flow, Validation Rules, Approval Process

- Developed a full-featured hotel booking and operations platform managing customers, room inventory, bookings, services, invoicing, and staff access control.
- Implemented inventory-aware booking logic (blocks bookings once a room type is fully reserved) and automated pricing calculation from check-in/check-out timestamps, including add-on service costs.
- Built an approval workflow for manager sign-off on discounts, a tiered loyalty/discount engine based on booking history, and multi-method payment handling (UPI, Card, Netbanking) with per-method fee logic.
- Enforced role-based security (only Help Desk can create bookings; customer records cannot be deleted) and automated transactional emails across the booking lifecycle.

CERTIFICATIONS AND ACHIEVEMENTS

- Letter of Recommendation (LOR) from Grras Solutions Pvt. Ltd. for excellent performance during Cyber Security Internship – 2024
- Completed Ethical Hacking Internship – Grras Solutions Pvt. Ltd., 2024
- Participated and qualified in national-level hackathons: Smart India Hackathon, Rajasthan Police Hackathon
